

High Performance Red Pigments for coating applications:

Dear customer,

This quarter we would like to draw your attention to two HPP red pigments suitable for coatings.

First one, the **Pigment Red 149**, is a perylene pigment.

IQC Coat Red 149

The pigment offers a bluish red coloration. It is used in industrial finishes because of its transparency, especially for metallic coatings. The PR 149 is also used in printing inks for PVC and metal deco, due to its solvent fastness, its high heat stability, and its fastness to sterilization processes.

The second one is the Pigment **Red 177 A3B** is an anthraquinone pigment.

IQC Coat Red 177 A3B

The PR 177 A3B produces a bluish red shade. This pigment is mainly used in industrial paints. In combinations with inorganic pigments, it offers high lightfastness and weatherfastness paints. It is used in automotive paint refinishes.
